

OCULUS

Introduction

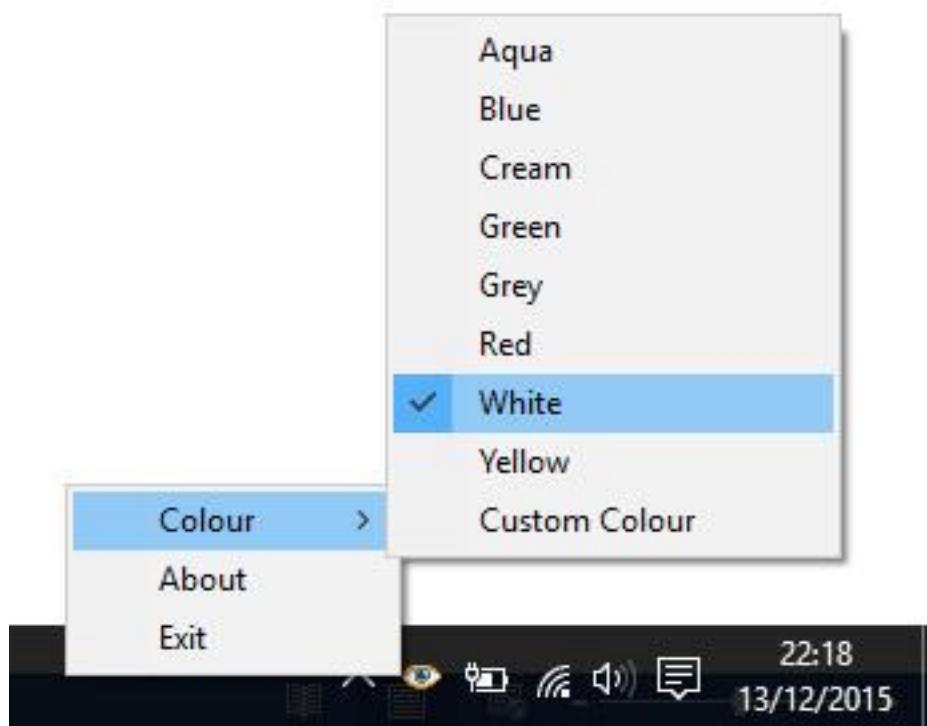

Meares-Irlen Syndrome, (also known as Scotopic Sensitivity Syndrome or Visual Stress) is the term used to describe a number of symptoms which make reading difficult and often unpleasant. The Oculus application will help people, both adults and children, by adjusting the default Window's white background colour to a colour which is more pleasant for reading.

Changing Background Colours

After installation a small eye icon will be displayed in the notification area of the task bar. To change the background colour follow the procedure below:

Using predefined colours

1. Right click on the Eye icon in the notification area of the task bar.

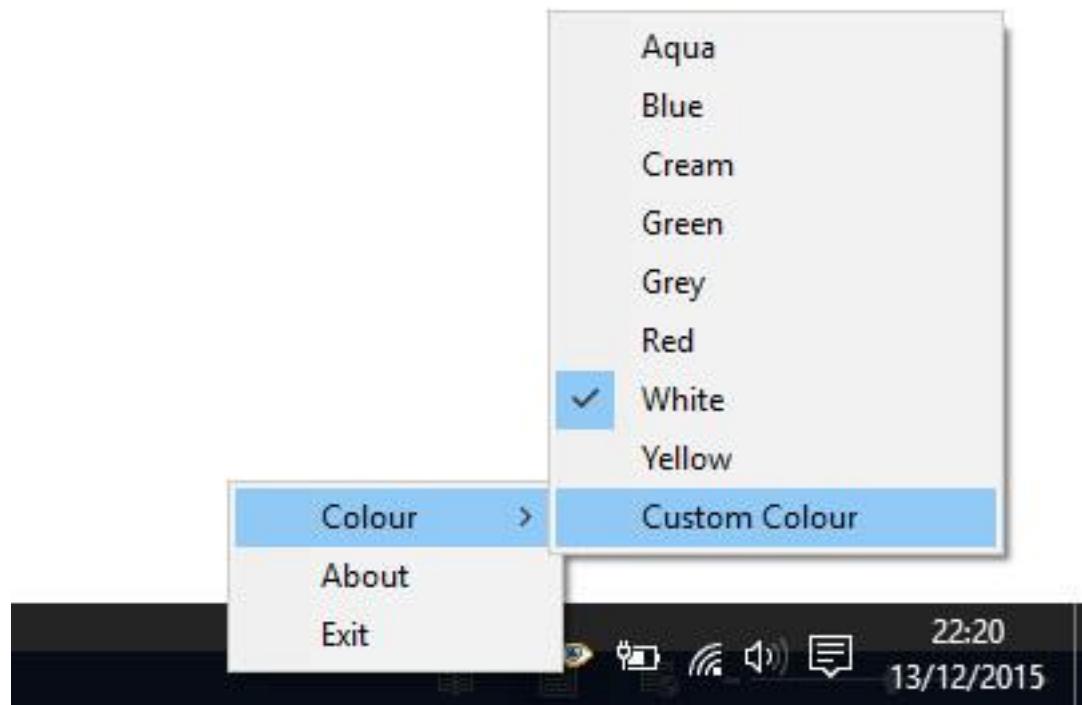

2. From the context menu click Colour and then select one of the predefined colours.

Using Custom Colours

1. Right click on the Eye icon in the notification area of the task bar.

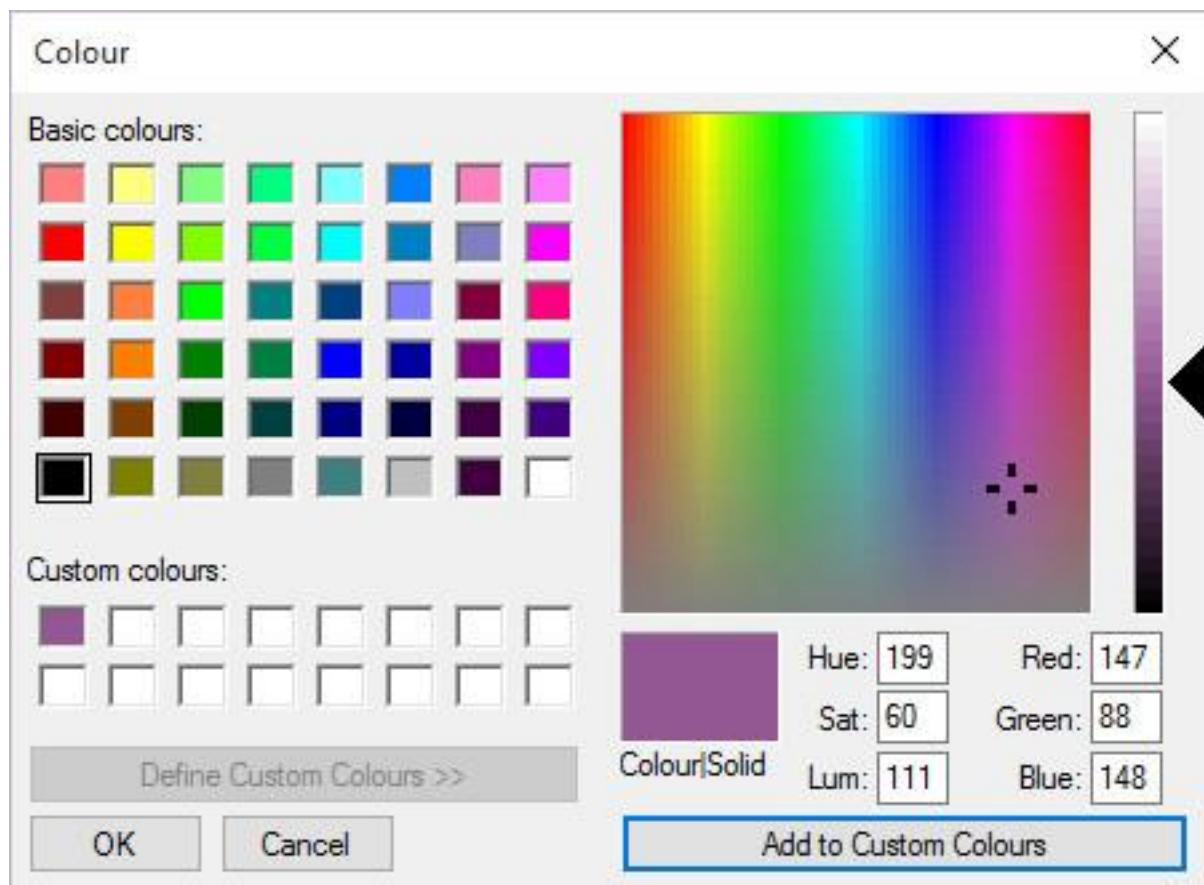

2. From the context menu click 'Colour' and then click 'Custom Colour'.

3. Click the 'Define Custom Colours' button.

4. Select a new colour from the colour picker on the right. Then click “Add to Custom Colours” button.

5. Click the OK button.
6. The background colour of your programs will now have changed.
